

Statistics [311]

COURSE OUTLINE

(1) GENERAL

SCHOOL	ANIMAL BIOSCIENCES		
ACADEMIC UNIT	DEPARTMENT OF ANIMAL SCIENCE		
LEVEL OF STUDIES	Undergraduate [Required]		
COURSE CODE	311	SEMESTER	3 rd
COURSE TITLE	STATISTICS		
INDEPENDENT TEACHING ACTIVITIES <i>if credits are awarded for separate components of the course, e.g. lectures, laboratory exercises, etc. If the credits are awarded for the whole of the course, give the weekly teaching hours and the total credits</i>		WEEKLY TEACHING HOURS	CREDITS (ECTS)
Lectures		3	3
Laboratory exercises		2	2
Total		5	5
Add rows if necessary. The organisation of teaching and the teaching methods used are described in detail at (d).			
COURSE TYPE <i>general background, special background, specialised general knowledge, skills development</i>	Background knowledge, Skills Development		
PREREQUISITE COURSES:	-		
LANGUAGE OF INSTRUCTION and EXAMINATIONS:	Greek		
IS THE COURSE OFFERED TO ERASMUS STUDENTS:	Yes (in Greek)		
COURSE WEBSITE (URL):			

(2) LEARNING OUTCOMES

Learning outcomes
<i>The course learning outcomes, specific knowledge, skills and competences of an appropriate level, which the students will acquire with the successful completion of the course are described.</i>
Consult Appendix A - Description of the level of learning outcomes for each qualifications cycle, according to the Qualifications Framework of the European Higher Education Area - Descriptors for Levels 6, 7 & 8 of the European Qualifications Framework for Lifelong Learning and Appendix B - Guidelines for writing Learning Outcomes
Upon successful completion of the course, students will be able (according to Bloom) to: - Describe the role and basic principles of Biostatistics in biological and agricultural sciences (Knowledge / Comprehension). - Distinguish stochastic and deterministic phenomena and experiments (Comprehension / Analysis). - Use enumeration methods and basic probability tools to solve problems (Application / Analysis). - Apply simple probability calculus in the context of biosciences (Application). - Recognize the practical value and importance of probabilities in understanding stochastic phenomena and experiments (Comprehension / Evaluation). - Summarize, present, and interpret biological or agricultural data in tabular or graphical form (Application / Analysis). - Translate a research question into an appropriate statistical hypothesis (Application / Synthesis). - Apply estimation and hypothesis testing methods to draw conclusions from experimental or sample data (Application / Analysis / Evaluation). - Identify the assumptions of selected statistical methods and perform checks to ensure validity (Analysis / Evaluation). - Comprehend and correctly interpret statistical significance (Comprehension / Analysis). - Draw conclusions about stochastic phenomena and experiments in biological and agricultural sciences and interpret them in terms of the underlying physical problem (Analysis / Evaluation / Synthesis). - Select and apply appropriate statistical inference methods to complete a research project (Application / Synthesis). - Comprehend the notion of uncertainty inherent in statistical inference (Comprehension / Analysis). - Critique data-based claims and evaluate data-driven decisions (Evaluation). - Apply ethical principles in the design, analysis, and interpretation of statistical data (Evaluation / Application).

General Competences	
Taking into consideration the general competences that the degree-holder must acquire (as these appear in the Diploma Supplement and appear below), at which of the following does the course aim?	
Search for, analysis and synthesis of data and information, with the use of the necessary technology	Project planning and management
Adapting to new situations	Respect for difference and multiculturalism
Decision-making	Respect for the natural environment
Working independently	Showing social, professional and ethical responsibility and sensitivity to gender issues
Team work	Criticism and self-criticism
Working in an international environment	Production of free, creative and inductive thinking
Working in an interdisciplinary environment	
Production of new research ideas	Others...
	
1) Retrieve, analyze and synthesize data and information, with the use of necessary technologies. 2) Adapt to new situations. 3) Make decisions. 4) Work autonomously. 5) Work in teams. 6) Create new research ideas. 7) Advance free, creative and inductive thinking.	

(3) SYLLABUS

1) The role and importance of Biostatistics in the biological and agricultural sciences. 2) Collection and summary presentation of biological and agricultural data (frequency table; numerical descriptive measures; barchart; piechart; box & whisker plot; histograms). 3) Useful counting rules (multiplication principle, permutations, k-permutations, combinations). 4) Practical notion of probability and basic probability tools. Conditional probability (multiplication rule; law of the total probability; Bayes theorem); Independence. 5) Random variables (cumulative distribution function; discrete and continuous random variables; probability function; probability density function; mean and variance). 6) Useful discrete distributions (Bernoulli; Binomial; Poisson). 7) Useful continuous distributions (Normal; ; t and F). 8) Central limit theorem. 9) Sampling distributions. 10) Estimation; point estimation (properties of an estimator); interval estimation (confidence intervals for a (difference of) population mean (s) or proportion (s)); 11) Testing hypotheses for a (difference of) population mean (s) or proportion (s)); 12) Goodness-of-fit test; Chi-Square test of independence. 13) Analysis of variance (single-factor ANOVA; two-factor ANOVA).

(4) TEACHING and LEARNING METHODS - EVALUATION

TEACHING METHOD <i>Face-to-face, Distance learning, etc.</i>	Direct (face-to-face).	
USE OF INFORMATION AND COMMUNICATIONS TECHNOLOGY <i>Use of ICT in teaching, laboratory education, communication with students</i>	Educational material, updates and announcements available on the web.	
TEACHING METHODS <i>The manner and methods of teaching are described in detail.</i> <i>Lectures, seminars, laboratory practice, fieldwork, study and analysis of bibliography, tutorials, placements, clinical practice, art workshop, interactive teaching, educational visits, project, essay writing, artistic creativity, etc.</i> <i>The student's study hours for each learning activity are given as well as the hours of non-directed study according to the principles of the ECTS</i>	Activity	Semester workload
	Lectures	52
	Independent study	48
	Course total (25 h of workload per ECTS)	100
STUDENT PERFORMANCE EVALUATION <i>Description of the evaluation procedure</i>	Written examination of different difficulty, based on the lectures offered, containing: - Problems and/or exercises.	

<i>Language of evaluation, methods of evaluation, summative or conclusive, multiple choice questionnaires, short-answer questions, open-ended questions, problem solving, written work, essay/report, oral examination, public presentation, laboratory work, clinical examination of patient, art interpretation, other</i> <i>Specifically-defined evaluation criteria are given, and if and where they are accessible to students.</i>	- Comprehension questions.
---	-----------------------------------
