

Geographic Information Systems [2075]

COURSE OUTLINE

(1) GENERAL

SCHOOL	ANIMAL BIOSCIENCES		
ACADEMIC UNIT	DEPARTMENT OF ANIMAL SCIENCE		
LEVEL OF STUDIES	Undergraduate [Free Elective]		
COURSE CODE	2075	SEMESTER	4th
COURSE TITLE	GEOGRAPHIC INFORMATION SYSTEMS		
INDEPENDENT TEACHING ACTIVITIES <i>if credits are awarded for separate components of the course, e.g. lectures, laboratory exercises, etc. If the credits are awarded for the whole of the course, give the weekly teaching hours and the total credits</i>		WEEKLY TEACHING HOURS	CREDITS (ECTS)
Theory: Lectures		3	3
Laboratory: Use of Software Tools		2	2
Total		5	5
<i>Add rows if necessary. The organisation of teaching and the teaching methods used are described in detail at (d).</i>			
COURSE TYPE <i>general background, special background, specialised general knowledge, skills development</i>	General knowledge, Scientific Area, Skills development		
PREREQUISITE COURSES:	-		
LANGUAGE OF INSTRUCTION and EXAMINATIONS:	Greek		
IS THE COURSE OFFERED TO ERASMUS STUDENTS:	Yes (in English)		
COURSE WEBSITE (URL):	http://openeclass.aua.gr		

(2) LEARNING OUTCOMES

Learning outcomes	
The course learning outcomes, specific knowledge, skills and competences of an appropriate level, which the students will acquire with the successful completion of the course are described. Consult Appendix A - Description of the level of learning outcomes for each qualifications cycle, according to the Qualifications Framework of the European Higher Education Area - Descriptors for Levels 6, 7 & 8 of the European Qualifications Framework for Lifelong Learning and Appendix B - Guidelines for writing Learning Outcomes	
Upon successful completion of the course the student will have: - achieved a deep understanding of what is a Geographic Information System (GIS) and how it works, - understood the role and impact of GIS in agriculture and economy, - understood the needs in terms of computer hardware and software, - distinguish the differences between the digital and conventional cartography, - understood what is a digital map, how it is created and how it is stored, - the ability to create new maps or add data to existing maps, - the ability to use mapping projection systems, - understood the satellite navigation systems and the operation/function of the GPS devices, - understood the different role of remote sensing and GIS, - understood the models of geographic data and all the different ways of storing, processing and retrieving these data, - become familiar with spatial queries that rise as a result of the use of new geographical services, - Will be able to exploit the data of a map and the ways to process these data in order to answer spatial queries, - Know the development stages, the methodologies, as well as, the management tools of the GIS, so as to actively participate in its development, - be able to exploit dedicated open source software packages for the processing and analysis of geographical data, - be able to use the computer at a collaborative learning level with fellows, in the context of team work.	
General Competences	
Taking into consideration the general competences that the degree-holder must acquire (as these appear in the Diploma Supplement and appear below), at which of the following does the course aim? Search for, analysis and synthesis of data and information, with the use of the necessary technology Project planning and management Respect for difference and multiculturalism	

<i>Adapting to new situations</i> <i>Decision-making</i> <i>Working independently</i> <i>Team work</i> <i>Working in an international environment</i> <i>Working in an interdisciplinary environment</i> <i>Production of new research ideas</i>	<i>Respect for the natural environment</i> <i>Showing social, professional and ethical responsibility and sensitivity to gender issues</i> <i>Criticism and self-criticism</i> <i>Production of free, creative and inductive thinking</i> <i>Others...</i>
- Search, analysis and synthesis of data and information by use of the necessary information and communication technologies. - Adaptation to new situations. - Decision making. - Individual work. - Team work. - Generation of new research ideas. - Work in related scientific fields. - Advance of free, fresh and logical thinking.	

(3) SYLLABUS

Theory 1. Introduction to Geographic Information Systems (GIS). 2. Files, Databases for geographic data. 3. Introduction to topology. 4. Digital cartography. Coordinate systems and projections. 5. Digital terrain models. 6. Satellite navigation systems and Global Positioning Systems (GPS) 7. Remote sensing and GIS 8. Spatial data models. 9. Insertion, verification, storing and retrieval of geographical data. 10. Spatial data structures. 11. Preprocessing of geographic data. 12. Geometric operations on geographic data. 13. Spatial interpolation methods. 14. Access to maps through the World Wide Web. 15. Location-based services.
Laboratory 1. Open source GIS applications. 2. Laboratory exercises. Case studies.

(4) TEACHING and LEARNING METHODS - EVALUATION

TEACHING METHOD <i>Face-to-face, Distance learning, etc.</i>	In classroom and in laboratory (face-to-face)	
USE OF INFORMATION AND COMMUNICATIONS TECHNOLOGY <i>Use of ICT in teaching, laboratory education, communication with students</i>	Exploitation of Information and Communication Technologies in teaching, in laboratory training and in communication with students. Use of dedicated software. Use of integrated e-learning system. Communication with students via open eclass platform and e-mail.	
TEACHING METHODS <i>The manner and methods of teaching are described in detail.</i> <i>Lectures, seminars, laboratory practice, fieldwork, study and analysis of bibliography, tutorials, placements, clinical practice, art workshop, interactive teaching, educational visits, project, essay writing, artistic creativity, etc.</i> <i>The student's study hours for each learning activity are given as well as the hours of non-directed study according to the principles of the ECTS</i>	Activity	Semester workload
	Lectures	39
	Laboratory work	26
	Independent study	60
	Course total (25 h of workload per ECTS)	125
STUDENT PERFORMANCE EVALUATION <i>Description of the evaluation procedure</i>	I. Theory	

<i>Language of evaluation, methods of evaluation, summative or conclusive, multiple choice questionnaires, short-answer questions, open-ended questions, problem solving, written work, essay/report, oral examination, public presentation, laboratory work, clinical examination of patient, art interpretation, other</i> <i>Specifically-defined evaluation criteria are given, and if and where they are accessible to students.</i>	Final Exam, written or oral, of increasing difficulty, which may include Multiple choice test, Questions of brief answer, Questions to develop a topic, Judgment questions and Exercise solving. Assuming feasibility, Progress exams will take place during the semester whose marking will contribute to the determination of the final Theory mark. Marking Scale: 0-10. Minimum Passing Mark: 5. II. Laboratory Final Exam, hands on computer, of the software tools taught. Assuming feasibility, - the performance of the trainees at the exercises assigned to them during the semester will be evaluated, - Progress exams will take place during the semester, and the mark of the above will contribute to the determination of the final Laboratory mark. Marking Scale: 0-10. Minimum Passing Mark: 5. The final Course mark is the average of the marks on Theory and Lab.
